JURY TRIAL DEMANDED

CIVIL ACTION NO. 6:21-cv-259

ORIGINAL COMPLAINT

Plaintiff Super Interconnect Technologies LLC (“Super Interconnect”) files this Original Complaint against Google LLC (“Google”) for infringement of U.S. Patent No. 7,627,044 (“the ’044 patent”), U.S. Patent No. 6,463,092 (“the ’092 patent”), and U.S. Patent No. 7,158,593 (“the ’593 patent”).

THE PARTIES

1. Super Interconnect Technologies LLC is a Texas limited liability company, located at 1701 Directors Blvd., Suite 300, Austin, Texas 78744.

2. On information and belief, Google LLC is a wholly-owned subsidiary of Alphabet, Inc. On information and belief, Google LLC is a limited liability company formed under the laws of the State of Delaware that has its principal place of business located at located at 1600 Amphitheatre Parkway, Mountain View, CA 94043. Google may be served with process through its registered agent, The Corporation Service Company, 251 Little Falls Drive, Wilmington, Delaware 19808. Google does business in the State of Texas and in this District.

JURISDICTION AND VENUE

3. This action arises under the patent laws of the United States, namely 35 U.S.C.

§§ 271, 281, and 284-285, among others.

4. This Court has subject matter jurisdiction pursuant to 28 U.S.C. §§ 1331 and 1338(a).

5. Venue is proper in this judicial district under 28 U.S.C. § 1400(b) because Google has committed acts of infringement in the District and has a regular and established place of business in this District, including its regular and established place of business at 500 W. 2nd St., Austin, TX 78701.

6. Google is subject to personal jurisdiction pursuant to due process due at least to its substantial business in this State, including: (A) at least part of its infringing activities alleged herein; and (B) regularly doing or soliciting business, engaging in other persistent conduct, and/or deriving substantial revenue from goods sold and services provided to Texas residents. Google has conducted and regularly conducts business within the United States and this District. Google has purposefully availed itself of the privileges of conducting business in the United States, and more specifically in Texas and this District. Google has sought protection and benefit from the laws of the State of Texas by placing infringing products into the stream of commerce through an established distribution channel with the awareness and/or intent that they will be purchased by consumers in this District.

7. On information and belief, Google has significant ties to, and presence in, this District, making venue in this judicial district both proper and convenient for this action.

COUNT I

(INFRINGEMENT OF U.S. PATENT NO. 7,627,044)

8. Super Interconnect incorporates paragraphs 1 through 14 herein by reference.

9. Super Interconnect is the assignee of the '044 patent, entitled "Clock-Edge Modulated Serial Link with DC-Balance Control," with ownership of all substantial rights in the '044 patent, including the right to exclude others and to enforce, sue, and recover damages for past

and future infringement. A true and correct copy of the '044 patent is attached as Exhibit A.

10. The '044 patent is valid, enforceable, and was duly issued in full compliance with Title 35 of the United States Code. The '044 patent issued from U.S. Patent Application No. 11/264,303.

11. To the extent any marking or notice was required by 35 U.S.C. § 287, Super Interconnect and all predecessors-in-interest to the '044 patent have complied with the requirements of that statute by providing actual or constructive notice to Google of its alleged infringement.

12. Google has and continues to directly and/or indirectly infringe (by inducing infringement and/or contributing to infringement) one or more claims of the '044 patent in this judicial district and elsewhere in the United States, including at least claims 1, 2, 8, 9, 10, 11, 12, 13, 14, 15 and 19, by, among other things, making, having made, using, offering for sale, selling, and/or importing electronic devices with Universal Flash Storage (UFS) that incorporate the fundamental technologies covered by the '044 patent. These products are referred to as the "'044 Accused Products." Examples of the '044 Accused Products include, but are not limited to, the Google Pixel and Google Pixel XL series of smartphones.

13. For example, the Google Pixel directly infringes claim 1 of the '044 patent, as shown in the below paragraphs.

14. An example of the Google Pixel is shown in the image below.

https://store.google.com/us/product/pixel_compare

15. Google incorporates UFS storage in its Pixel family of products, as shown in the image below.

What makes the Pixel phones interesting, to me, is the relative lack of technical compromise. They have a fast processor. A fast camera (with improved and quicker HDR+). Fast storage (UFS 2.0). A fast fingerprint scanner. Fast software (they really are blazing-quick). Fast charging. Fast updates (seamless updates). A fast GPU (for VR). There is little about these phones you can point to and say Google cheaped out on. And isn't that what so many of us have been demanding for years? A Google phone that could be positioned against the iPhone as legitimate competition (even if the iPhone does have its advantages - and disadvantages).

<http://www.androidpolice.com/2016/10/04/google-pixel-and-pixel-xl-hands-on-google-takes-on-the-iphone-by-becoming-the-iphone/>

16. The images below show that the Google Pixel's UFS storage uses the MIPI M-PHY protocol for physical layer communication between the UFS host and the UFS device.

Arasan Chip Systems Inc. White Paper, “Universal Flash Storage: Mobilize Your Data” at 6 (Oct. 2012).

M-PHY I/O

MIPI defines two types of M-PHY, type 1 and type 2. The UFS specification calls out type 1. M-PHY Type 1 uses NRZ signaling for HS and PWM signaling for LS, while type 2 uses NRZ signaling for both HS and LS.

UFS utilizes two speed modes, high-speed and low-speed. Low speed mode In Gear 1 is used upon power up or reset, then a transition occurs to high-speed gears for data transmission. The low speed gears and high-speed gears are listed here for your reference. UFS v1.1 has been ratified and supports HS Gear 2 running approximately @ 3Gbps per lane. The UFS spec also supports up to 4 lanes for higher throughput.

Id.

17. UFS hosts and devices, which are included in the '044 Accused Products, contain signal transmitters. These signal transmitters drive DC-balanced differential signals for a communications channel. Those signals include a pair of data signals: a positive data signal and a negative data signal (*see, e.g.,* Dout +/- and Din +/- in the *Arasan* figure above). These transmitters include circuitry that multiplex clock, data, and control signals to apply them to the communications channel node, allowing the UFS hosts and devices to communicate between each

other.

18. The '044 Accused Products thus include each and every limitation of claim 1 of the '044 patent; accordingly, they literally infringe this claim. Google directly infringes the '044 patent by making, using, offering to sell, selling, and/or importing the '044 Accused Products. Google is thereby liable for direct infringement.

19. During discovery and development of its infringement contentions, Plaintiff may provide additional theories under which Google infringes the '044 patent besides the example provided above, including for the same product and using the same components identified above, and nothing in the example above is meant to limit the infringement allegations of Plaintiff or limit the interpretations of the claims or their terms.

20. At a minimum, Google has known that the '044 Accused Products infringe the '044 patent at least as early as the service date of the complaint in *Super Interconnect Techs. LLC v. Google LLC*, No. 2:18-cv-00463 (E.D. Tex.). During that litigation, Plaintiff repeatedly and explicitly set forth Google's infringement of the '044 patent via its Pixel phones' incorporation of UFS devices, including in a detailed expert report on infringement. Despite that clear evidence of infringement, Google has refused to take a license to the '044 patent and continues to willfully infringe the '044 patent. Additionally, Google continued to release new products (e.g., the Pixel 5 and 4a) that incorporate UFS devices. Google did so despite its knowledge that such devices would infringe the '044 patent and without taking a license the '044 patent. Google has made a business decision to flout the patent rights of Plaintiff despite its knowing infringement of the '044 patent, presumably relying on the significant advantage in resources that Google holds over Plaintiff.

21. Thus, despite having knowledge of the '044 patent and knowledge that it is directly and/or indirectly infringing one or more claims of the '044 patent, Google has nevertheless

continued its infringing conduct and disregarded an objectively high likelihood of infringement. Google's infringing activities relative to the '044 patent have been, and continue to be, willful, wanton, malicious, in bad-faith, deliberate, consciously wrongful, flagrant, characteristic of a pirate, and an egregious case of misconduct beyond typical infringement such that Plaintiff is entitled under 35 U.S.C. § 284 to enhanced damages up to three times the amount found or assessed.

22. Upon information and belief, since at least the above-mentioned date when Google was on notice of its infringement, Google has actively induced, under U.S.C. § 271(b), third-party manufacturers, distributors, importers and/or consumers that purchase or sell the '044 Accused Products that include all of the limitations of one or more claims of the '044 patent to directly infringe one or more claims of the '044 patent by making, having made, using, offering for sale, selling, and/or importing the '044 Accused Products. Since at least the notice provided on the above-mentioned date, Google does so with knowledge, or with willful blindness of the fact, that the induced acts constitute infringement of the '044 patent. Upon information and belief, Google intends to cause, and has taken affirmative steps to induce, infringement by these third-party manufacturers, distributors, importers, and/or consumers by, inter alia, creating advertisements that promote the infringing use of the '044 Accused Products, creating established distribution channels for the '044 Accused Products into and within the United States, manufacturing the '044 Accused Products in conformity with U.S. laws and regulations, distributing or making available instructions or manuals for these products to purchasers and prospective buyers, and/or providing technical support, replacement parts, or services for these products to these purchasers in the United States. For example, Google provides technical support for the Pixel on its own website at the following web address: <https://support.google.com/pixelphone#topic=7078250>.

23. Super Interconnect has been damaged as a result of Google's infringing conduct described in this Count. Google is, thus, liable to Super Interconnect in an amount that adequately compensates Super Interconnect for Google's infringement, which, by law, cannot be less than a reasonable royalty, together with interest and costs as fixed by this Court under 35 U.S.C. § 284.

COUNT II
(INFRINGEMENT OF U.S. PATENT NO. 6,463,092)

24. Super Interconnect incorporates paragraphs 1 through 23 herein by reference.

25. Super Interconnect is the assignee of the '092 patent, entitled "System and Method for Sending and Receiving Data Signals Over A Clock Signal Line," with ownership of all substantial rights in the '092 patent, including the right to exclude others and to enforce, sue, and recover damages for past and future infringement. A true and correct copy of the '092 patent is attached as Exhibit B.

26. The '092 patent is valid, enforceable, and was duly issued in full compliance with Title 35 of the United States Code. The '092 patent issued from U.S. Patent Application No. 09/393,235.

27. To the extent any marking or notice was required by 35 U.S.C. § 287, Super Interconnect and all predecessors-in-interest to the '092 patent have complied with the requirements of that statute by providing actual or constructive notice to Google of its alleged infringement.

28. Google has and continues to directly and/or indirectly infringe (by inducing infringement and/or contributing to infringement) one or more claims of the '092 patent in this judicial district and elsewhere in the United States, including at least claims 1, 2, 5, 10, and 11 by, among other things, making, having made, using, offering for sale, selling, and/or importing electronic devices with Universal Flash Storage (UFS) that incorporate the fundamental

technologies covered by the '092 patent. These products are referred to as the "'092 Accused Products." Examples of the '092 Accused Products include, but are not limited to, the Google Pixel and Google Pixel XL series of smartphones.

29. For example, the Google Pixel directly infringes claim 1 of the '029 patent, as shown in the below paragraphs.

30. An example of the Google Pixel is shown in the image below.

https://store.google.com/us/product/pixel_compare

31. Google incorporates UFS storage in its Pixel family of products, as shown in the image below.

What makes the Pixel phones interesting, to me, is the relative lack of technical compromise. They have a fast processor. A fast camera (with improved and quicker HDR+). Fast storage (UFS 2.0). A fast fingerprint scanner. Fast software (they really are blazing-quick). Fast charging. Fast updates (seamless updates). A fast GPU (for VR). There is little about these phones you can point to and say Google cheaped out on. And isn't that what so many of us have been demanding for years? A Google phone that could be positioned against the iPhone as legitimate competition (even if the iPhone does have its advantages - and disadvantages).

<http://www.androidpolice.com/2016/10/04/google-pixel-and-pixel-xl-hands-on-google-takes-on-the-iphone-by-becoming-the-iphone/>

32. The images below show that the Google Pixel's UFS storage uses the MIPI M-PHY protocol for physical layer communication between the UFS host and the UFS device.

Arasan Chip Systems Inc. White Paper, "Universal Flash Storage: Mobilize Your Data" at 6 (Oct. 2012).

M-PHY I/O

MIPI defines two types of M-PHY, type 1 and type 2. The UFS specification calls out type 1. M-PHY Type 1 uses NRZ signaling for HS and PWM signaling for LS, while type 2 uses NRZ signaling for both HS and LS.

UFS utilizes two speed modes, high-speed and low-speed. Low speed mode In Gear 1 is used upon power up or reset, then a transition occurs to high-speed gears for data transmission. The low speed gears and high-speed gears are listed here for your reference. UFS v1.1 has been ratified and supports HS Gear 2 running approximately @ 3Gbps per lane. The UFS spec also supports up to 4 lanes for higher throughput.

Id.

33. UFS hosts and devices, which are included in the '092 Accused Products, transmit a clock and data signal over a signal line, for example, according to the MIPI M-PHY protocol. To do so, the '092 Accused Products include a clock generator, with multiple inputs, modulating the falling edge of an output signal to indicate different data values, thus providing for data transmission between the UFS hosts and devices. And at least one of the inputs that the clock generator receives is a control signal indicating a data value to be transmitted.

34. The '092 Accused Products thus include each and every limitation of claim 1 of the '092 patent; accordingly, they literally infringe this claim. Google directly infringes the '092 patent by making, using, offering to sell, selling, and/or importing the '092 Accused Products. Google is thereby liable for direct infringement.

35. During discovery and development of its infringement contentions, Plaintiff may provide additional theories under which Google infringes the '092 patent besides the example provided above, including for the same product and using the same components identified above, and nothing in the example above is meant to limit the infringement allegations of Plaintiff or limit the interpretations of the claims or their terms.

36. At a minimum, Google has known that the '092 Accused Products infringe the '092 patent at least as early as the service date of the complaint in *Super Interconnect Techs. LLC v. Google LLC*, No. 2:18-cv-00463 (E.D. Tex.). During that litigation, Plaintiff repeatedly and explicitly set forth Google's infringement of the '092 patent via its Pixel phones' incorporation of UFS devices, including in a detailed expert report on infringement. Despite that clear evidence of infringement, Google has refused to take a license to the '092 patent and continues to willfully infringe the '092 patent. Additionally, Google continued to release new products (e.g., the Pixel 5 and 4a) that incorporate UFS devices. Google did so despite its knowledge that such devices would infringe the '092 patent and without taking a license the '092 patent. Google has made a business decision to flout the patent rights of Plaintiff despite its knowing infringement of the '092 patent, presumably relying on the significant advantage in resources that Google holds over Plaintiff.

37. Thus, despite having knowledge of the '092 patent and knowledge that it is directly and/or indirectly infringing one or more claims of the '092 patent, Google has nevertheless continued its infringing conduct and disregarded an objectively high likelihood of infringement. Google's infringing activities relative to the '092 patent have been, and continue to be, willful, wanton, malicious, in bad-faith, deliberate, consciously wrongful, flagrant, characteristic of a pirate, and an egregious case of misconduct beyond typical infringement such that Plaintiff is entitled under 35 U.S.C. § 284 to enhanced damages up to three times the amount found or assessed.

38. Upon information and belief, since at least the above-mentioned date when Google was on notice of its infringement, Google has actively induced, under U.S.C. § 271(b), third-party manufacturers, distributors, importers and/or consumers that purchase or sell the '092 Accused Products that include all of the limitations of one or more claims of the '092 patent to directly

infringe one or more claims of the '092 patent by making, having made, using, offering for sale, selling, and/or importing the '092 Accused Products. Since at least the notice provided on the above-mentioned date, Google does so with knowledge, or with willful blindness of the fact, that the induced acts constitute infringement of the '092 patent. Upon information and belief, Google intends to cause, and has taken affirmative steps to induce, infringement by these third-party manufacturers, distributors, importers, and/or consumers by, inter alia, creating advertisements that promote the infringing use of the '092 Accused Products, creating established distribution channels for the '092 Accused Products into and within the United States, manufacturing the '092 Accused Products in conformity with U.S. laws and regulations, distributing or making available instructions or manuals for these products to purchasers and prospective buyers, and/or providing technical support, replacement parts, or services for these products to these purchasers in the United States. For example, Google provides technical support for the Pixel on its own website at the following web address: <https://support.google.com/pixelphone#topic=7078250>.

39. Super Interconnect has been damaged as a result of Google's infringing conduct described in this Count. Google is, thus, liable to Super Interconnect in an amount that adequately compensates Super Interconnect for Google's infringement, which, by law, cannot be less than a reasonable royalty, together with interest and costs as fixed by this Court under 35 U.S.C. § 284.

COUNT III
(INFRINGEMENT OF U.S. PATENT NO. 7,158,593)

40. Super Interconnect incorporates paragraphs 1 through 39 herein by reference.

41. Super Interconnect is the assignee of the '593 patent, entitled "Combining a Clock Signal and a Data Signal," with ownership of all substantial rights in the '593 patent, including the right to exclude others and to enforce, sue, and recover damages for past and future infringement. A true and correct copy of the '593 patent is attached as Exhibit C.

42. The '593 patent is valid, enforceable, and was duly issued in full compliance with Title 35 of the United States Code. The '593 patent issued from U.S. Patent Application No. 10/099,533.

43. To the extent any marking or notice was required by 35 U.S.C. § 287, Super Interconnect and all predecessors-in-interest to the '593 patent have complied with the requirements of that statute by providing actual or constructive notice to Google of its alleged infringement.

44. Google has and continues to directly and/or indirectly infringe (by inducing infringement and/or contributing to infringement) one or more claims of the '593 patent in this judicial district and elsewhere in the United States, including at least claims 34 and 35, by, among other things, making, having made, using, offering for sale, selling, and/or importing electronic devices with Universal Flash Storage (UFS) that incorporate the fundamental technologies covered by the '593 patent. These products are referred to as the "'593 Accused Products." Examples of the '593 Accused Products include, but are not limited to, the Google Pixel and Pixel XL series of smartphones.

45. The Google Pixel directly infringes claim 34 of the '593 patent, as shown in the below paragraphs.

46. An example of the Google Pixel is shown in the image below.

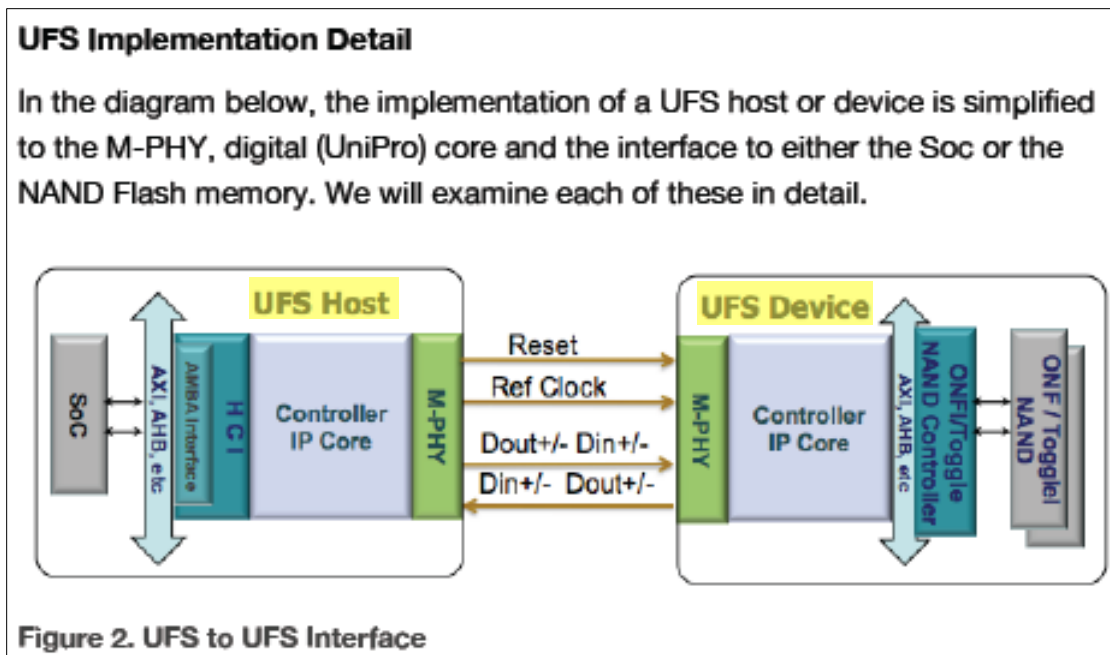

https://store.google.com/us/product/pixel_compare

47. Google incorporates UFS storage in its Pixel family of products, as shown in the image below.

What makes the Pixel phones interesting, to me, is the relative lack of technical compromise. They have a fast processor. A fast camera (with improved and quicker HDR+). Fast storage (UFS 2.0). A fast fingerprint scanner. Fast software (they really are blazing-quick). Fast charging. Fast updates (seamless updates). A fast GPU (for VR). There is little about these phones you can point to and say Google cheaped out on. And isn't that what so many of us have been demanding for years? A Google phone that could be positioned against the iPhone as legitimate competition (even if the iPhone does have its advantages - and disadvantages).

<http://www.androidpolice.com/2016/10/04/google-pixel-and-pixel-xl-hands-on-google-takes-on-the-iphone-by-becoming-the-iphone/>

48. The images below show that the Google Pixel's UFS storage uses the MIPI M-PHY protocol for physical layer communication between the UFS host and the UFS device.

Arasan Chip Systems Inc. White Paper, “Universal Flash Storage: Mobilize Your Data” at 6 (Oct. 2012).

M-PHY I/O

MIPI defines two types of M-PHY, type 1 and type 2. The UFS specification calls out type 1. M-PHY Type 1 uses NRZ signaling for HS and PWM signaling for LS, while type 2 uses NRZ signaling for both HS and LS.

UFS utilizes two speed modes, high-speed and low-speed. Low speed mode In Gear 1 is used upon power up or reset, then a transition occurs to high-speed gears for data transmission. The low speed gears and high-speed gears are listed here for your reference. UFS v1.1 has been ratified and supports HS Gear 2 running approximately @ 3Gbps per lane. The UFS spec also supports up to 4 lanes for higher throughput.

Id.

49. UFS hosts and devices, which are included in the '593 Accused Products, contain signal transmitters, as shown for example in the *Arasan* figure above. These transmitters generate a combined a clock and encoded data signal. The transmitters encode data and pulse width modulate the encoded data into the combined signal. This encoding scheme shifts an energy spectrum of the combined clock and encoded data signal away from an effective loop bandwidth of a clock recovery block.

50. The '593 Accused Products thus include each and every limitation of claim 34 of the '593 patent; accordingly, they literally infringe this claim. Google directly infringes the '593 patent by making, using, offering to sell, selling, and/or importing the '593 Accused Products. Google is thereby liable for direct infringement.

51. During discovery and development of its infringement contentions, Plaintiff may provide additional theories under which Google infringes the '593 patent besides the example provided above, including for the same product and using the same components identified above, and nothing in the example above is meant to limit the infringement allegations of Plaintiff or limit the interpretations of the claims or their terms.

52. At a minimum, Google has known that the '593 Accused Products infringe the '593 patent at least as early as the service date of the complaint in *Super Interconnect Techs. LLC v. Google LLC*, No. 2:18-cv-00463 (E.D. Tex.). During that litigation, Plaintiff repeatedly and explicitly set forth Google's infringement of the '593 patent via its Pixel phones' incorporation of UFS devices, including in a detailed expert report on infringement. Despite that clear evidence of infringement, Google has refused to take a license to the '593 patent and continues to willfully infringe the '593 patent. Additionally, Google continued to release new products (e.g., the Pixel 5 and 4a) that incorporate UFS devices. Google did so despite its knowledge that such devices would infringe the '593 patent and without taking a license the '593 patent. Google has made a business decision to flout the patent rights of Plaintiff despite its knowing infringement of the '593 patent, presumably relying on the significant advantage in resources that Google holds over Plaintiff.

53. Thus, despite having knowledge of the '593 patent and knowledge that it is directly and/or indirectly infringing one or more claims of the '593 patent, Google has nevertheless continued its infringing conduct and disregarded an objectively high likelihood of infringement.

Google's infringing activities relative to the '593 patent have been, and continue to be, willful, wanton, malicious, in bad-faith, deliberate, consciously wrongful, flagrant, characteristic of a pirate, and an egregious case of misconduct beyond typical infringement such that Plaintiff is entitled under 35 U.S.C. § 284 to enhanced damages up to three times the amount found or assessed.

54. Upon information and belief, since at least the above-mentioned date when Google was on notice of its infringement, Google has actively induced, under U.S.C. § 271(b), third-party manufacturers, distributors, importers and/or consumers that purchase or sell the '593 Accused Products that include all of the limitations of one or more claims of the '593 patent to directly infringe one or more claims of the '593 patent by making, having made, using, offering for sale, selling, and/or importing the '593 Accused Products. Since at least the notice provided on the above-mentioned date, Google does so with knowledge, or with willful blindness of the fact, that the induced acts constitute infringement of the '593 patent. Upon information and belief, Google intends to cause, and has taken affirmative steps to induce, infringement by these third-party manufacturers, distributors, importers, and/or consumers by, *inter alia*, creating advertisements that promote the infringing use of the '593 Accused Products, creating established distribution channels for the '593 Accused Products into and within the United States, manufacturing the '593 Accused Products in conformity with U.S. laws and regulations, distributing or making available instructions or manuals for these products to purchasers and prospective buyers, and/or providing technical support, replacement parts, or services for these products to these purchasers in the United States. For example, Google provides technical support for the Pixel on its own website at the following web address: <https://support.google.com/pixelphone#topic=9153446>.

55. Super Interconnect has been damaged as a result of Google's infringing conduct

described in this Count. Google is, thus, liable to Super Interconnect in an amount that adequately compensates Super Interconnect for Google's infringement, which, by law, cannot be less than a reasonable royalty, together with interest and costs as fixed by this Court under 35 U.S.C. § 284.

JURY DEMAND

Super Interconnect hereby requests a trial by jury pursuant to Rule 38 of the Federal Rules of Civil Procedure.

PRAYER FOR RELIEF

Super Interconnect requests that the Court find in its favor and against Google, and that the Court grant Super Interconnect the following relief:

- a. Judgment that one or more claims of the '044, '092, and '593 patents have been infringed, either literally and/or under the doctrine of equivalents, by Google and/or by others whose infringement has been induced by Google;
- b. Judgment that Google account for and pay to Super Interconnect all damages to and costs incurred by Super Interconnect because of Google's infringing activities and other conduct complained of herein;
- c. Judgment that Google account for and pay to Super Interconnect a reasonable, ongoing, post-judgment royalty because of Google's infringing activities and other conduct complained of herein;
- d. Judgment that Google's conduct warrants that the Court award increased damages up to treble damages pursuant to 35 U.S.C. § 284;
- e. Judgment that Super Interconnect be granted pre-judgment and post-judgment interest on the damages caused by Google's infringing activities and other conduct complained of herein;
- f. Judgment and an order finding this to be an exceptional case and requiring Google to pay the costs of this action (including all disbursements) and attorneys' fees as provided by 35 U.S.C. § 285; and
- g. That Super Interconnect be granted such other and further relief as the Court may deem just and proper under the circumstances.

DATED: March 15, 2021

Respectfully submitted,

/s/ Jeffrey R. Bragalone.
