

## Setting LTspice up for use with Electric

[Return to the LTspice page at CMOSedu.com](#) or [Return to the Electric VLSI page at CMOSedu.com](#)

- Ensure [LTspice](#) is installed on your computer.
- Start Electric and go to File -> Preferences (see image below). The Run Program path is either:  
**C:\PROGRA~1\LTspice\IV\scad3.exe** or  
**C:\PROGRA~2\LTspice\IV\scad3.exe** or, if using LTspice XVII,  
**C:\PROGRA~1\LTspiceXVII\XVIIx64.exe** or  
**C:\PROGRA~2\LTspiceXVII\XVIIx64.exe**  
where, using the [8.3 filename](#), C:\PROGRA~1\ is the same as C:\Program Files\ and C:\PROGRA~2\ is the same as C:\Program Files (x86)\.
- Note that while the Run Program field is not case sensitive the "with args:" field is case sensitive (so use the uppercase names as seen)  
For copying into the "with args:" field: **-i \${FILENAME} -r \${FILENAME\_NO\_EXT}.raw -o \${FILENAME\_NO\_EXT}.out**
- Cross-probing between layout or schematic using Electric's Probe window (instead of LTspice's probe), can be done with these setups if the -i (interactive) is changed to -b (batch)  
Ensure that in LTspice, Tools -> Control Panel -> Operation, raw files (simulation results) are not automatically deleted when LTspice is closed else you won't see the results!!!  
If you get an Exception Caught!!! when Electric loads simulation data it likely means that you have run out of memory. See number 15 [here](#) for how to increase the memory allocated to the JVM
